EGGLOGAN EGG STORAGE · PLAIN LANGUAGE GUIDE

Understanding Your “Low Stock” Alerts

No formulas, no jargon. One idea explains every low-stock notification you will ever see — and it takes about twenty seconds to understand.

THE ONE THING TO REMEMBER

The number 0.5 means “half a week’s worth”

That is the whole rule.

01 What the alert is actually saying

You sold a certain number of eggs in the last seven days. The `0.5` setting simply divides that number **by two**. Whatever you end up with is your **warning line**.

```
How many eggs you sold this week    1,551
------------------------------------------------
Divide by 2  (because the setting says 0.5)      776  ← your warning line
------------------------------------------------
The rule:   fewer than 776 eggs left   →   warn me
```

That is all a low-stock alert is. There is no hidden cleverness.

02 Your real numbers

Using Medium (MD) from your own database:

```
Sold in last 7 days                        1,551 eggs
Warning line  =  1,551 ÷ 2  =                    776 eggs
You actually have                                  6,900 eggs

6,900 is much more than 776   →   nothing to worry about
```

WHY YOU ARE NOT SEEING ALERTS

You have roughly **31 days of stock** on every egg size. The alert only wakes up when you are down to about **3 and a half days** left. You are nowhere near that yet, so silence here is good news.

03 Why “half a week” is the right moment to warn

You sell about **222 eggs a day**. So the warning line is really a countdown:

```
776 eggs  ÷  222 a day  =  3.5 days left
```

Read any alert as: *"You only have a few days of eggs — time to restock."*

04 Choosing your own number

Think of the setting as a dial for **how much buffer you want to keep**.

YOU SET	IT MEANS	WARNS YOU WHEN	GOOD FOR
0.3	one-third of a week	2 days left	Fast, reliable deliveries
0.5	**half a week**	**3.5 days left**	**Your current setting**
0.7	most of a week	5 days left	Hard to find new stock

LOWER NUMBER = WARN LATER **HIGHER NUMBER = WARN EARLIER**

Restocking takes 2 days? Use **0.3**.
Restocking takes 3–4 days? Use **0.5**.
Restocking takes over 5 days? Use **0.7**.

05 What you will see when it fires

1. **The warning line is worked out**
   Your week's sales are halved. That number is the line.

2. **Your stock is measured against it**
   Less than the line means the alert appears.

3. **You are told how many days are left**
   Not eggs — *days*. That is the number to think in.

4. **You are told how many trays to buy**
   So the alert is already a shopping list, not just a worry.

06 An example, start to finish

Suppose your Medium stock drops to **690 eggs** and sales have not changed:

```
Step 1   Warning line      1,551 ÷ 2          =   776 eggs
Step 2   Compare             690 is less than 776      =   LOW STOCK
Step 3   Days left           690 ÷ 222 a day    =   3.1 days
Step 4   What is missing     776 − 690          =   86 eggs short
Step 5   What to buy         86 ÷ 30 per tray   =   2.9  →  buy 3 trays
```

> **THAT IS THE ENTIRE ALERT**
>
> `Low stock: Medium — 690 eggs left (about 3.1 days of cover).`
> `Check: 690 < 776 cutoff = 1,551 sold in 7d × 0.5 threshold.`
> `Short by 86 eggs — buy 3 trays to clear it.`

07 Two special cases

SITUATION	WHAT HAPPENS
You have zero eggs	HIGH ALERT Always fires, whatever the setting is. There is nothing to sell at all, so it skips the calculation entirely.
A quiet week	If a size sold nothing in the last 7 days, the system uses the **forecast** instead. The alert tells you which one it used.

08 How to change it

1. Open the **Settings** page.
2. Find the row called `low_stock_threshold`.
3. Type a decimal — `0.6`, **not** `60`.
4. Press **Update**. It takes effect straight away.

> **TWO HELPFUL THINGS TO LOOK FOR**
>
> **1.** The Settings page now shows a “What low stock actually means here” panel listing every egg size with its stock, its weekly sales, its warning line and how many days of cover that is.
>
> **2.** Allowed values run from `0.1` to `1.0`. Anything outside that range is quietly pulled back to the nearest limit.

IF YOU REMEMBER NOTHING ELSE

Divide this week’s sales by two.
Fewer eggs than that? **Time to restock.**
